(Exercise 11.04)

Modify the two pervious exercises such that the RMI server only provides read-only access to its model (i.e. no client option to add a task, only to get a task and to get the size)

(Exercise 11.05)

Consider how you want to design a socket version of the previous exercise (exercise 11.01-11.02 for read-only clients)

(Exercise 11.06)

Design and implement an RMI system of the CD-application having MVC on both client and server side. Use exercise 10.02 as basis (a single user CD system in MVC). Draw the class diagram and implement it.

(Exercise 11.07)

Design (do not implement) a socket version of the previous exercise.
